

Kanishk Bhati

kk.bhatii.007@gmail.com — 6399807000 — Meerut, U.P
[Portfolio](#) — [GitHub](#) — [LinkedIn](#)

PROFESSIONAL SUMMARY

Backend-focused Full-Stack Engineer experienced in building modular web applications using Spring Boot, Angular (Nx), and PostgreSQL. Skilled in secure authentication (JWT + session management), Redis-based caching, database optimization, and RESTful API design. Experienced with Dockerized environments and monitoring using Prometheus and Grafana.

EDUCATION

Coding Ninjas, Gurugram, Haryana
Web Development

August 2022 – Dec 2023

IIMT Engineering College, Meerut, U.P
Bachelor of Science in Computer Science

August 2016 – July 2019

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python

Backend: Spring Boot, NestJS, Express.js, RESTful API Design, JWT Authentication, Session Management

Frontend: Angular (Nx), React

Databases & Cache: PostgreSQL, MySQL, SQLite, Redis

DevOps & Tools: Docker, Git, CI/CD, AWS (S3, SES) Prometheus, Grafana

Concepts: Database Optimization, Caching Strategies, WebSocket Communication, Role-Based Access Control (RBAC)

PROFESSIONAL EXPERIENCE

Coding Ninjas, Gurugram, Haryana

Software Development Engineer Intern (Full Stack)

February 2024 – Jul 2024

- Optimized website performance, reducing load time by 30% using caching and lazy loading techniques.
- Designed and implemented end-to-end UI/UX improvements, aligning changes with business requirements.
- Revamped user flow for course navigation, leading to a 15% increase in user retention.
- Automated leaderboard updates using cron jobs & event-driven triggers, increasing leaderboard engagement by 60%.

28One, Gurugram, Haryana

Software Development Engineer (Full Stack)

Aug 2024 – Present

- Designed and developed an Auto-Planner service (Vehicle Routing / Inspection Scheduling) using Spring Boot and Timefold Solver to optimize inspector assignment and route planning.
- Modeled complex domain constraints including travel time, inspection duration, capacity limits, unassigned penalties, and configured solver termination strategies (time-based and unimproved-spent limits).
- Exposed REST endpoints for dynamic planning and re-planning, and containerized the service using multi-stage Docker builds for environment-based deployments.
- Optimized database schema and query performance, reducing data retrieval latency by 35%.

PROJECTS

MarketMate – Distributed Marketplace Platform

[Live](#) — [Backend](#) — [Frontend](#) — [Chat](#) — [Infra](#)

- Architected and deployed a distributed marketplace platform with separated services: Spring Boot REST API, Angular (Nx) frontend, and real-time chat service (NestJS).
- Implemented secure authentication using JWT (httpOnly cookies), PostgreSQL-backed sessions, and Redis-based validation cache.
- Integrated AWS S3 for media storage and applied Redis caching to reduce database load.
- Integrated AWS SES (SDK v2) for transactional email delivery (OTP, email verification, user notifications) with domain-level DKIM setup and Resilience4j retry & circuit breaker patterns.
- Containerized the full stack with Docker Compose and added monitoring using Prometheus and Grafana.

Alphabet Music API

[Source Code](#)

- Developed a music management REST API and Android App using Node.js, Express.js, MongoDB and Java.
- Implemented JWT-based authentication and file handling with Multer for secure data management.
